

## SMTP Server Settings of Gmail, Hotmail, Yahoo Mail, AOL Mail, GMX Mail

### Gmail SMTP and POP Server Settings

**Gmail Outgoing Mail (SMTP) Server:** smtp.gmail.com

**Use Authentication:** Yes

**Port for SSL:** 587 or 465

**Gmail Incoming Mail (POP3) Server:** pop.gmail.com

**SSL Required:** Yes

**Port:** 995

**Note:** [Enabling POP in Gmail](#)

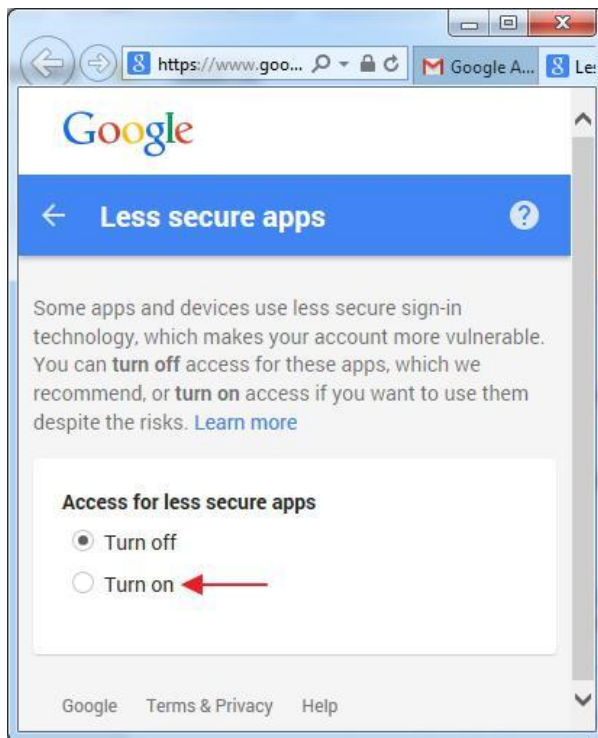

**Account Name:** Your full email address (including @gmail.com or @your\_domain.com)

**Email Address:** Your email address

**Password:** Your Gmail password

**Attention:** Gmail imposes high security standards. It may block sign in attempts from some desktop email clients or mobile apps. To use Gmail in 1and1Mail, please log in your Gmail via your web browser and go to "[Less secure apps](#)" page to turn on "Access for less secure apps".

<https://myaccount.google.com/lesssecureapps>

If your Gmail account has [2-Step Verification](#) enabled, you have to create an application-specific password for 1and1Mail. Please visit this [webpage](#) for the instructions. After you generate the app password, go to 1and1Mail and replace your original Gmail password with the 16-character password.

## ← App passwords

App passwords allow 2-Step Verification users to access their Google Accounts through apps such as Mail on an iPhone or Mac, or Outlook. We'll generate the app passwords for you, and you won't need to remember them. [Learn more](#)
